

SlingShot Assembly Acquires Jade Electronics

Tuesday, June 25, 2019 – SlingShot Assembly continues to alter the landscape of U.S. PCB assembly with the acquisition of Wisconsin-based Jade Electronics. Jade Electronics will join forces with BEI Electronics which SlingShot Assembly purchased in 2018. The combination of BEI and Jade expands the SlingShot footprint, capacity and capabilities while providing a unique offering of ultra-fast, high-quality prototype assembly integrated with higher volume PCB assembly and related services.

“We are dedicated to providing our customers with excellent PCB assemblies services and top-notch customer service,” said Kevin Ryan, President of SlingShot Assembly and BEI Electronics. “It is exciting to continue to grow our capabilities and capacity through the addition of Jade Electronics to the family.”

BEI Electronics has operated in Wisconsin for more than two decades partnering with a wide variety of customers on production builds of both PCBs as well as full product assemblies. BEI provides customers with PCB assembly, box build/integration, testing and conformal coating among other services. A growing presence in the Electronics Manufacturing Services industry, BEI has built a culture of quality and trust with its customer base.

Also located in Wisconsin, Jade Electronics brings strong capabilities in circuit board assembly and deep customer relationships. Offering additional expertise in surface mount, hand soldering, coating and test capabilities, Jade will fit snugly with BEI. The combined companies will continue to serve the mid-west United States and beyond.

Parent company SlingShot Assembly is changing how engineers and their companies think about prototype PCB projects. Tapping into the power of the industry’s best software and automated assembly equipment, SlingShot completes high quality, full turn-key PCB assemblies in as little as 72 hours. Customers can quote and order projects online in minutes or, if they prefer, work through a dedicated service and engineering team to quote and place orders. SlingShot’s engineering team runs each order through the industry’s leading Design for Assembly (DFA) software to address design issues pre-assembly saving time and money and often eliminating entire prototype revisions.
